

COWLEY

SIXTH FORM COLLEGE

A-LEVEL

GEOGRAPHY

Overview

Students will be taught a variety of topics covering human and physical geography. All units are relevant to the world in which we live; for example Carbon Cycle, Globalisation and Deforestation.

What to expect in lessons

Lessons include a variety of activities, with plenty of opportunities for discussion.

Outside the classroom

Fieldwork is a fundamental element in Geography.

Fieldtrips aim to provide students with skills that allow them to observe, analyse and investigate the environment.

Being situated so close to the coast, students are able to make the most of the North of England's beautiful physical land forms and fieldtrips include visits to local coastlines.

As part of Year 13, students are able to choose their own destination to explore.

Support

Support is given to students regarding their independent coursework. Students are equipped with the skills needed.

Equipment that you will need

Basic stationery (pen, pencil, ruler), plus a calculator.

Geography is a great subject as there is a lot to learn from rainforests to the carbon cycle.

I think that the teachers are very helpful and they are fun to work with.

Progression

Past Geography students at Cowley have gone on to study Geography, Geology, Geoenvironmental Hazards, Anthropology and International Relations at university.
